

Black

Did you know that there's no such color as black? Well no color you can buy anyway. When you get a can of black paint, it looks black, but it's actually made from very high concentrations of some other color, usually blue or green. Sometimes you can see the color it's really made of, like after you've washed a black T-shirt over and over...as it fades it might start looking a little green.

Green black. Blue black. No such thing as true black.

Why? Don't ask me.

Some people say there's no such thing as pure evil either. I don't know about that, but I do know this: I know a black that's blacker than any other black.

I know a black that's made of red.
